

How much is

If 25 million people entered your convenience store at the rate of **one every minute**, 24 hours a day, it would be **more than 47 years** before the last person walked in.

At **400,000 open/close cycles per year**, a middle school entrance will still be performing **62 years from now** when it reaches 25 million cycles, and these students have great-grandchildren.

Every resident of New England – Massachusetts, Connecticut, Rhode Island, Maine, Vermont and New Hampshire – could walk through your entryway and you could still welcome **everyone living in Michigan** without reaching 25 million.

A combined total of **25 million acres of National Parks** would include:

- Denali (AK)
- Death Valley (CA)
- Glacier Bay (AK)
- Yellowstone (ID/MT/WY)
- Lake Mead (AZ/NV)
- Everglades (FL)
- Big Bend (TX)
- Glacier (MT)
- Lake Clark (AK)
- Grand Canyon (AZ)
- Joshua Tree (CA)
- Badlands (SD)
- Shenandoah (VA)

Your entryway would have to admit a **full capacity crowd (107,501)** at every football game in the University of Michigan Stadium for the next **38 years** to reach 25 million cycles.

If your surgery entryway could handle the annual traffic of all 28 surgery suites at the University of Chicago Hospitals, it would still be operating **81 years from now** when it reaches 25 million cycles.

You'd need to watch the Daytona 500 for more than **11 centuries** before the total miles driven by all the cars would total 25 million.

The average professional baseball player would have to play in **every game of every season for 38,580 years** before reaching 25 million at-bats.

With a seating capacity of 555, the new Airbus A380 – **the largest commercial jet ever built** – would have to make **45,045 flights** to carry a total of 25 million passengers.
